# LED DRL conversion kit for MAN 2014-2020

Complete conversion kit for replacing the white light in the DRL with yellow lights.

Complete kit for replaing the original white light in the DRL with yellow / amber light. The set consists of 2 boards, one for each side, and heat conductive paste to be used when mounting the boards on the original heat sinks.

The powerful CREE XP-E2 LEDs gives you a great and powerful amber light, that matches the standard side marker lamps.

Replacing them is very easy:

- Unmount the heat sink on the back of the headlight
- Disconnect the cable on the board
- Remove the original print (2 screws)
- Add some heat conductive paste on the new board.
- Mount the new board (2 screws)
- Connect the plug on the board
- Reassemble the headlight

The boards can be made with other light colors on request
