Serie 30 - Slider

Plastic slider that fits in to the tracks of series 30 profiles, and can be used for guiding movable parts.

Plastic slider that fits in to the tracks of series 30 profiles, and can be used for guiding movable parts.

There are three holes on the slider, that is used for fastening a part. The holes can easily be drilled up to a larger diameter, and it is also possible to cut threads in the plastic. It is also possible to countersink the holes on the bottom, if you want to fasten a part with a bolt through the slider.

As the slider is made of plastic / POM, it glides easily without wearing the aluminium.
