Serie 40 - Corner joint

Smart corner-joint that is used for screwing two or three profiles together in a corner, eg. in a box. Covers for the holes included.

Smart corner join that is used for screwing two or three profiles together in a corner, eg. in a box. You simply cut threads in the end of three profiles, where after you use a button head bolt for fastening. Notches on the join that go in to the profile ensures that the profiles cannot be twised loose. This gives you a secure, solid and stiff joint.

Covers for the holes included, creating a nice finish.

The join has the same dimensions as the profiles, 40x40x50, and fits perfectly in the system.
