Warm White FlexiStrip 24V - HP 950lm 100cm - Stocksale

Extra powerful LED flexistrip in Warm White for 24V with 10cm wire

Extra powerful LED flexistrip in Warm White for 24V. The ribbon is splashproof, but should not be used outdoors or anywhere else where they are particularly vulnerable

The LED ribbon is connected directly to the 24Vdc via the preinstalled 10 cm cable. It can be, for example, on a truck or a suitable 230V transformer that makes 24V DC.

The LED strips are divided into sections of 10cm, where it is possible to cut / shorten the flexi strip. On each section there are 6 LEDs so that at 100cm becomes 60 LEDs.

The double adhesive 3M tape provides a secure mounting on metal, plastic and painted overlays. Should not be mounted on raw and stained wood. Clean the surface before mounting.
