Spanish markerlamps

Stylish Spanish marking light with possibility to make dual color LED upgrade. 2 types: red/white or red/orange glass.

Spanish lamp, earrings, Pablo lamp, lollipops, and marking light for mirrors - a beloved item has many names. Stylish Spanish marking light in a classic design. The lamps are equipped with a BA15s socket by default, but you can purchase our dual color LED bulbs if you wish to upgrade to LED and possibly take advantage of the dual color feature.

The LED markerlamps are available in 2 types:

- A double-sided light with red glass on one side and white glass on the other side.
- A double-sided light with red glass on one side and orange glass on the other side

LED emitter to spanish lamps :

These have to be ordered seperately : Our Matronics LED emitter fits in to the lamp with BA15s socket. It has 6 bright LEDs, and is potted in frosted resin. The original bulb holder is removed, and our emitters put in. Notice that you need to order two emitters for one lamp. They are fastened with the included screws, back to back. There is 1 meter wire for connecting them to power.

Typically you will want a red/yellow to the rear side, and a yellow/white forward. With a Dual Color US light controller, you can use the lamp as indicator as well. With a DC rear and front light controller, it can be used for both position light, brake light and indicators.

Connecting LED emitters

For the DC emitters with 2 wires, you swap plus and minus to change colors. Connect yellow wire to plus, and it lights up yellow.
