Drawer rail, galvanized steel, 20kg

3 section drawer rail with ball bearings, and full extension. It can carry up to 20kg (pair). Easy to mount as the last section can be disconnected.

3 section drawer rail with ball bearings, and full extension. It can carry up to 20kg, more than enough for typical uses.

These rails are sold in sets of 2.

The rail is easy to mount and dismount as the last section can be disconnected, by pushing on the black plastic arm on the inside of the rail.

There are mounting holes along the length of the profile.

The rails can be extended to double their length - This means that the model of, for example, 600mm can move a drawer 600mm from its original position. The number is thus also an indicator of how much movement/distance you can get.
