Dee shackle - 4mm - Rustfri A4

A shackle is used for joining two or more wires, chains or ropes. The bolt is loosened, the loops feed through, and the bolt is fastened again.

A shackle is used for joining two or more wires, chains or ropes. The bolt is loosened, the loops feed through, and the bolt is fastened again.

The thickness of the shackle is 4mm.

We do not have information about capacity, so it cannot be used for lifting.
