T-track guide-rail system - Fence profile

Fence profile that fits with the fence bracket, and glider with adjustable angle. Used for positioning and moving parts in the machine.

Fence profile that fits with the fence bracket, and glider with adjustable angle. Used for positioning and moving parts in the machine. In a table saw this would be used for the sled, and in a router, this would line up the parts being fed through.

The tracks in the profile only fit the fence bracket and the sliding adjustable angle.
