T-track guide-rail system - Tiltable end stop

End stop that fits into the standard profile. Can be used for making an adjustable end stop for a circular saw or similar.

End stop that fits into the standard profile, where it can be securely fastened with the locking handle.

There is a sliding nut in the bottom, and an edge in the bottom of the end stop that ensures it stays in the track of the profile. It can also be used on one side of the profile with measuring tape, but it will not be possible to move completely up.

It can be used for making an adjustable end stop for a circular saw or similar.
